

## Lecture Plan

**Name of the College:** Government College of Arts, Science and Commerce, Sanquelim-Goa

**Name of Faculty:** Minoshka D'Souza

**Subject:** Mathematics

**Paper code:** MAT-5000

**Program:** MSc Mathematics

**Division:** -

**Academic year:** 2026-27

**Semester:** I

**Total Lectures:** 60

**Course Objectives:** This course will develop fundamental concepts in Real Analysis and make the student acquainted with tools of analysis which is essential for the study and appreciation of many related branches of mathematics and applications.

**Expected Course Outcome:** On completion of this course the learner will be familiar with various topics including real number system, sequences, limits and continuity and derivatives.

**Student Learning Outcome:** At the end of the course the student will be able to

1. Recall and explain concepts in the real number system, finite sets and countability, sequences, continuity and derivatives
2. Prove important theorems related to topics studied.
3. Apply knowledge gained to solve basic mathematical problems in real analysis and metric spaces.
4. Analyse, compare and differentiate between various concepts studied in order to solve problems.

| Month     | Lecture From | Lecture To | No. of lectures allotted | Topic, Subtopic to be covered                                                                                                                                                                                                     | Exercise/ Assignment        | ICT Tools          | Reference books                      |
